

Thermal Condition Monitoring and Alerting for Industrial Applications

PROTECT YOUR ASSETS AND MITIGATE ENVIRONMENTAL RISK

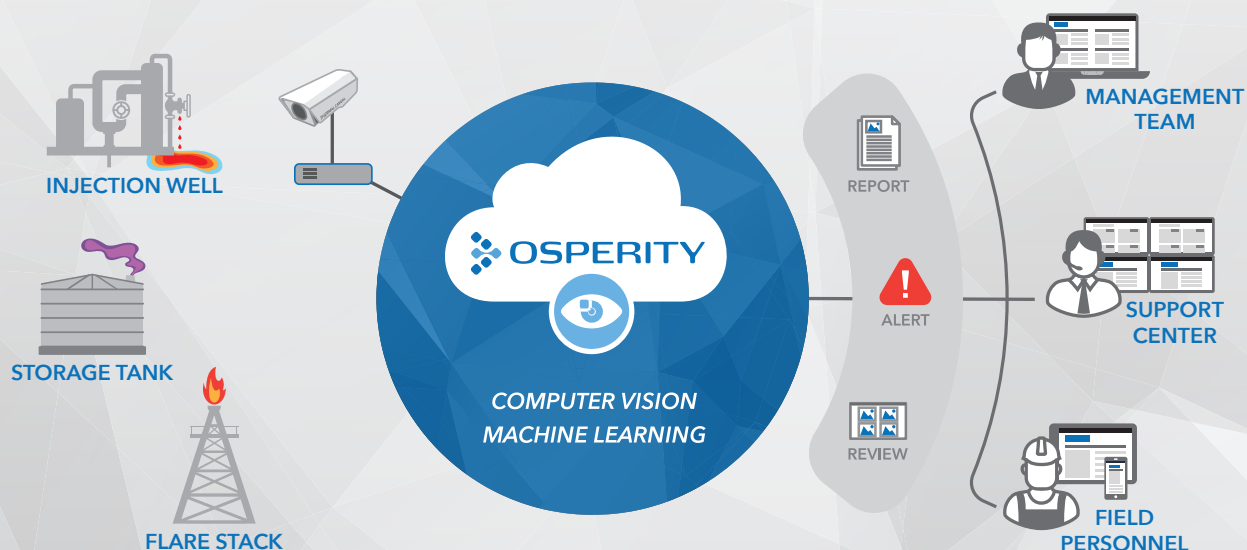

Osperity's intelligent visual monitoring platform paired with thermal cameras dramatically improves incident response and reporting.

Our solutions for injection well leak detection, flare stack monitoring and storage tank venting detection are proven to deliver strong return on investment, while also protecting the environment.

With Osperity, users can create their own threshold alerts for exception-based management, see live and historical temperature charts, and view thermal images and video of leaks or other incidents.

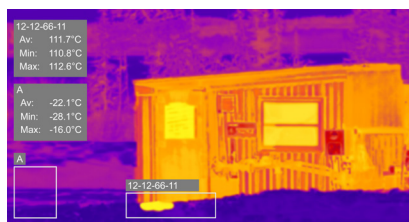

Osperity's thermal condition monitoring and alerting solutions, backed by our comprehensive managed service, are easy to deploy and manage. The solutions are suitable for low-bandwidth networks, including LTE and are typically deployed outside of corporate IT infrastructure. Osperity integrates easily with SCADA and other systems via our API.

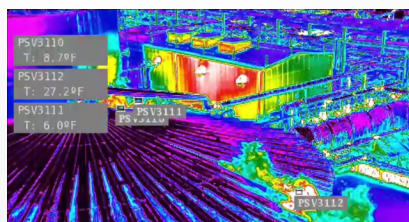

Protect your Assets and Mitigate Environmental Risk With Osperity's Thermal Imaging Solutions

INJECTION WELL LEAK DETECTION

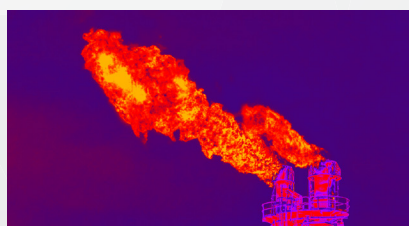

- ◆ Protect people, assets and the environment
- ◆ Detect small leaks that other sensors may miss
- ◆ Manage by exception
- ◆ Works in all weather conditions
- ◆ Accurate alerts with minimal false positives

TANK VENTING DETECTION

- ◆ Manage by exception
- ◆ Detect hot liquid venting events automatically
- ◆ Low-cost solution - no need for expensive OGI cameras
- ◆ Hardware can easily be moved to other locations

FLARE STACK MONITORING

- ◆ Instantly get notified on loss of combustion
- ◆ Avoid costly regulatory fees and fines
- ◆ No costly on-premise installs
- ◆ No need for a control room, Ethernet or WIFI
- ◆ Works under any weather conditions

Proactive alerts

Prevent leaks from becoming major problems through proactive detection and exception-based alerts.

Set it and forget it

Prioritize work activity and boost labor productivity through exception-based asset management.

Complete cloud solution

Easy to deploy and use and backed by Osperity's managed service, our platform is optimized for industrial asset monitoring.
